

BeA fuel cell

(can)

Advantages at a glance

Functions fully at low temperatures down to – 8° Celsius / 18° Fahrenheit.

That means:

Higher productivity

Larger capacity, 40 g of gas in comparison to 30 g.

That means: ca. 33 % more nails driven in with each BeA fuel cell.

Non-polluting propellant and a clean propane / butane fuel mixture.

That means:

Cleaner combustion space, no CFC, environmentally friendly, more efficient.

Metering valve originally developed for medical technology

That means:

Exact metering, combustion without residue, saves gas and money!

Quick-change snap-on valve is a time-saving feature.

No fuel loss with special aluminium bag inside of fuel cell.

That means:

Better efficiency

Nailer automatically lubricated by the high-grade full synthetic oil mixed with the gas.

That means:

Longer tool-life
