

**PRESS RELEASE: 25<sup>TH</sup> AUGUST 2005**

**The Single Solution for Bedding Manufacturing**

Bedding manufacturers now have the option to source from one single supplier for all fixing applications, thanks to the introduction of two new products from BeA Fastening Systems Limited, one of Europe's leading suppliers of a unique range of high quality fastening systems.

The forward thinking company, dedicated to continual product development, has added an innovative bedding plier and rammer tool to its already comprehensive range of effective fastening systems for the bedding trade.

The 110/16 – 414L bedding plier, with a slim line nose for accuracy, is unrivalled in terms of load capacity, high output and longevity, and offers a cost-effective solution for fixing padding onto mattress springs. The tool is also easy-to-maintain thanks to a removable grooved anvil block for straightforward replacement.

The long magazine, which will accept staples in lengths up to 16mm, has a load capacity of 160 and features a single-handed catch for rapid and uncomplicated reloading. The presence of an inline clencher promotes accurate clenching regardless of material thickness.

The tool, which is weight balanced around the handle to reduce wrist strain, brings new meaning to the term user-friendly. The technologically advanced, lightweight plier has been designed and developed with operator comfort in mind to ensure excellent control and effortless operation. Anti-vibration protection to the handle means that the tool meets all the current requirements for vibration levels, whilst an exhaust silencer reduces noise output.

The highly specialised BCS 31-193 Pneumatic Stapler has the power to drive 16 gauge round crown divergent point staples in lengths up to 22mm with increased holding power for springs to frame build up. The standard tool comes with a single shot mechanism but thanks to a wide driver nose and blade, a double shot action capability for extra strong fixing is available as an alternative.

With a nose length of up to 200mm, the tool will operate successfully regardless of the thickness of sprung bases and has a clearing slot for quick jam release. The tool also features the highly effective BeA exhaust silencer, a double handle grip for control and accurate positioning and a safety covered guard and trigger system to prevent accidental firing.

“Due to the fact that numerous types and sizes of fasteners and tools are required to manufacture mattresses and divan bases, obtaining a comprehensive fastening solution from under one roof has been virtually impossible,” commented Dave Meakin, UK sales manager, BeA Fastening Systems Limited. “However, following the recent introduction of two new products, BeA can now offer the complete solution.”

BeA Fastening Systems Limited has a comprehensive range of fasteners and tools, specially designed for the bedding industry. These include pneumatic staplers; hog ring tools; clipping tools; and tackers, with a range of different sized fasteners plus hotmelt adhesives.

For literature and further information on the complete range of equipment and materials available from BeA contact the sales office on 0800 0935154 or visit the web site [www.bea.uk.com](http://www.bea.uk.com).
