

PRESS RELEASE: 20TH OCTOBER 2005

MORE UNITS FOR MOORES THANKS TO BeA

BeA Fastening Systems Limited, European leader in the field of high quality fastening systems for a host of applications, has supplied major UK manufacturer of quality kitchen, bathroom and bedroom furniture, Moores Furniture Group, with five online self reload staplers in order to assist with increased production demands.

Working in conjunction with a Ligmatech press, BeA's tools form an integral part of the bespoke fully automated robotic fastening system, with an estimated usage of a staggering five million staples per year.

"The implementation of the automated system has heralded significant manufacturing benefits, namely in terms the production output for our complete range of kitchen units, which has seen a dramatic increase since the installation of the new technology," commented Philip Atwell, manufacturing engineer, Moores Furniture Group.

"Apart from increased productivity, we specified BeA's products on the basis of the organisation's proven track record," continued Philip Atwell. "For many years we have successfully utilised BeA's wide range of hand held tools on the factory floor, which have been noted for their reliability, performance and longevity. Coupled with the fact that BeA is a German owned company and works regularly alongside German-based Ligmatech, it seemed the obvious choice."

BeA squared up to the challenge by providing Moores with five K92/18-25 self reload tools, capable of accepting staples in lengths between 18 and 25mm with a guaranteed stapling rate of 5 staples per second.

Previous fastening techniques employed involved assembling the kitchen units manually, which proved both costly and time consuming. With the new system in place, the Ligmatech press clamps the units together whilst the self reload tool staples the hardboard to the back panel in one operation for a secure fastening solution which yields a rigid unit.

The fundamental benefit of BeA's self reload tools is the substantial loading capacity compared with standard hand held fastening tools which dramatically increases output. Due to the fact that each machine can be loaded with 400 staples, downtime is reduced significantly.

BeA boasts an enormous stock holding, rapid order turnaround, 72 hour emergency overnight delivery and a complex computer system which tracks and monitors client orders, all of which reduce the need for clients to carry large stocks. A team of mobile service engineers provides rapid response for breakdown and preventative maintenance which enables production continuity.

BeA is committed to offering a level of customer service and support which is second-to-none. Thanks to the company's unique service, it can provide tailor-made solutions to any automated fastening application. The organisation will work closely with companies to develop a bespoke, cost-effective fastening solution - it can design special purpose jigs and attachments, modify tools and manufacture engineered components.

For literature and further information on the complete range of equipment and materials available from BeA contact the sales office on 0800 0935154 or visit the web site www.bea.uk.com.
